

GRUNTLE

SYSTEM STATUS: COLLAPSED

\$GRUNTLE MEMECOIN. THE DOOMSDAY TOKEN.

DOCUMENT ID

GRUNTLE_WP_REFUGE_10.1

- > The market has collapsed.
- > The charts are burning.
- > The influencers have vanished.
- > Only \$GRUNTLE memecoin remains.
- > Secure your allocation in presale.

THE FINAL LOG

The markets collapsed. The charts burned. The influencers vanished into the wasteland. Everything is dust. Except the mud.

\$GRUNTLE is a deadpan capybara meme coin built on the Ethereum blockchain. It is not a revolutionary Layer-2. It is not a metaverse gaming ecosystem. It is a crypto presale for the permanently exhausted. Designed as a terminal-grade survival instrument, \$GRUNTLE offers a digital refuge for chart survivors who no longer need fake hype, rocket emojis, or promises about the moon. The moon is probably irradiated anyway.

We offer only one thing: a secure smart contract and a lukewarm mud puddle.

THE PROBLEM

Civilization tried too hard. The Web3 space became a bloated bureaucracy of over-leveraged protocols, VC-dumping schemes, and fabricated utility. Traders were forced to operate at maximum anxiety, chasing volatile green candles in a system designed to extract their liquidity.

The damage is already done. The average crypto investor is fatigued. They are terminal-grade citizens looking for a place to rest.

THE SOLUTION

Enter Gruntle. An apathetic capybara who watched the collapse with heavy-lidded indifference. While others panicked, he found a mud pit.

\$GRUNTLE leans fully into refuge, fatigue, and collapse-era humor. We have engineered a dynamic presale intake protocol where users can submit whatever digital scrap survived the market crash (ETH, USDT, USDC, or BNB) in exchange for \$GRUNTLE tokens. The brand does not celebrate volatility; it survives it.

SUPPLY ALLOCATION

TOTAL SUPPLY

5,000,000,000

NETWORK

ERC-20

Note: The Presale Intake Terminal dynamically extracts allocations from the Doomsday Vault and Scavenger Funds based on wasteland demand. Once the terminal shuts down, the remaining supply is permanently locked into the ecosystem.

The Doomsday Vault (25% | 1,250,000,000)

Locked securely in a multi-sig bunker. This ecosystem treasury is reserved strictly for future CEX listings, building utilities, or bribing whatever passes for authority these days.

Apocalypse Awareness (20% | 1,000,000,000)

The marketing wallet. Used to pay scavengers and KOLs to send smoke signals across the irradiated timeline so other survivors know the mud is warm.

The Deep Mud Reserve (20% | 1,000,000,000)

A tactical buyback and burn stockpile. When the market dips, we use this to swallow up the weak hands and permanently burn the tokens. The puddle shrinks, the value holds.

The Scavenger Fund (20% | 1,000,000,000)

Essential rations to keep the Discord mods from turning feral and the devs from starving. Pure, day-to-day operational fuel.

The Mud Pit (10% | 500,000,000)

The decentralized liquidity pool. Paired directly with presale funds and locked away safely so you can actually trade this dust without fear of it evaporating.

Hibernation Staking (5% | 250,000,000)

Rewards for those willing to sink to the bottom and hold their breath.

MECHANISM

For those who wish to expend absolutely zero energy, the protocol offers Hibernation Staking.

By sending your \$GRUNTLE tokens to the secure staking contract, you lock them up until the end of the presale intake. In return, the protocol drips a fixed APY at 25% into your wallet. Lock your tokens, close your eyes, do nothing, and earn more mud. Staked tokens can be withdrawn 7 days after our first official decentralized exchange (DEX) listing.

ROADMAP.LOG

Most tokens promise you the world. We promise you a puddle. Here is the sequential survival plan.

PHASE.01 > INITIALIZATION

- > Deploy and audit the survival smart contract.
- > Establish social channels for wasteland lurkers.
- > Launch the \$GRUNTLE presale intake terminal.

PHASE.02 > COMMUNITY.EXPANSION

- > Deploy marketing rations to Web3 scavengers.
- > Expand apocalypse awareness to fill the presale cap.
- > Close presale intake and initiate token claims.

PHASE.03 > LIQUIDITY.PROVISION

- > Lock presale funds into the decentralized mud pit.
- > Launch \$GRUNTLE on public crypto exchanges.
- > Secure tracking listings on CoinMarketCap and CoinGecko.

PHASE.04 > REFUGE.PROTOCOL

- > Activate hibernation staking for passive mud accumulation.
- > Bribe whatever is left of authority for CEX listings.
- > Sit in the mud and establish permanent refuge.

LEGAL.DISCLAIMER

READ CAREFULLY BEFORE INTAKE

\$GRUNTLE is a meme coin with no intrinsic value, just like the fiat currency that caused the collapse. It carries no expectation of financial return. There is no formal team, no corporate entity, and no roadmap guarantees. This document is for informational and entertainment purposes only and does not constitute financial advice.

All investments carry risk in the wasteland. The mud is not guaranteed. We promise nothing.

Proceed with maximum exhaustion.
